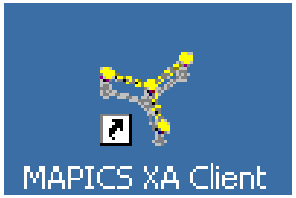
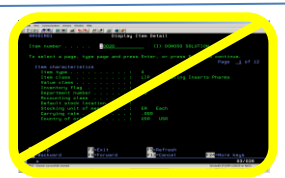
The New Face of MAPICS

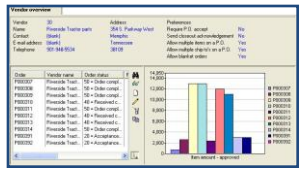
R6 Browser to R7.8 Power Link



Jim Boyer

Jim.boyer@cistech.net





Release 7 Overview

- Takes a great application (Browser) and makes it exceptional (PowerLink)
- Release 7 is written in Java (Browser was written in Small Talk)
- Brings all of the Java functionality with it
  - Select multiple records by holding Control + click
  - Select range of records by clicking on the first record then Shift + click on the last record

PowerLink Improvements for Information Access

- Quick change
- Graph cards
- Compound cards
- Presentation schemes
- Subset tip text
- Cascading subsets
- Power expand
- URL & e-Mail buttons
- Column statistics
- Application settings
- ‘Locate’ Button

- User definition favorites
- Express customization
- Logical field tip text
- Change AND copy templates
- Code file maintenance
- Auto logoff
- Auto key generation
- Open action
- Workspaces
- Improved workbenches

Quick Change

- The ‘Quick Change’ action (pencil with lines following) builds a card with the fields used in the view
- Used when you need to change multiple records but cannot use Mass Change
- ‘Auto Advance’ allows you to go through all the records in the subset
- ‘Bypass’ allows you to skip a record

The New Face of MAPICS

Subset Improvements

- Tip Text
  - Move the cursor over the subset, view, calculated column and the criteria for the subset will be displayed without going to ‘Customize – Subset’
- Cascading Subsets
  - After applying the first subset, you can then use a secondary subset against the list being displayed

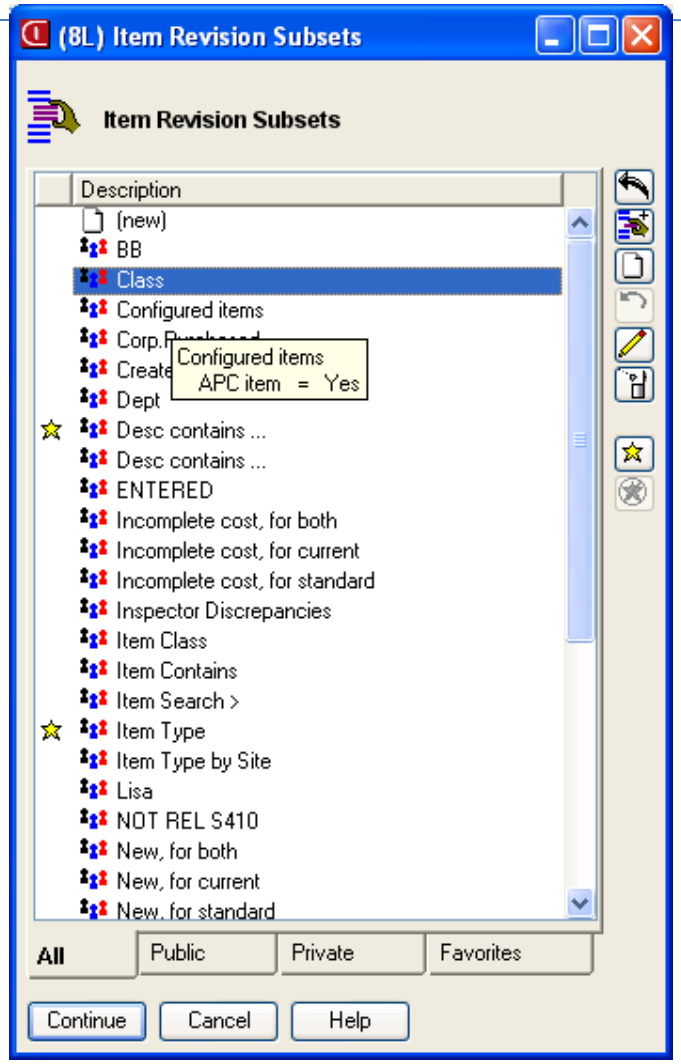
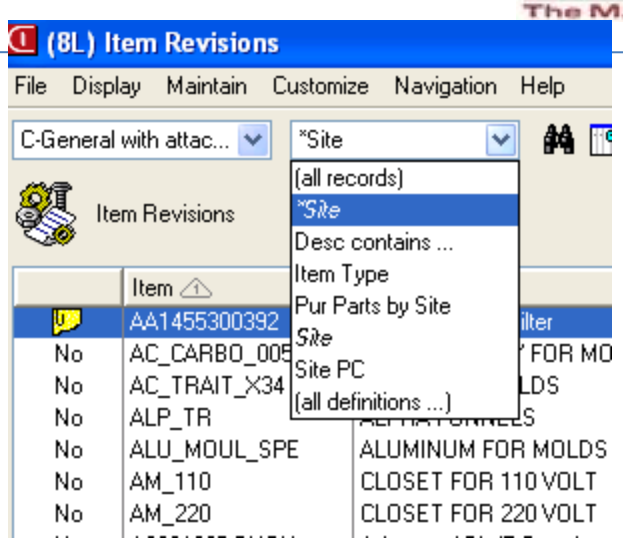
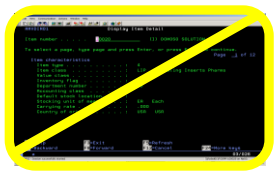
The New Face of MAPICS

Favorites (subsets & views)

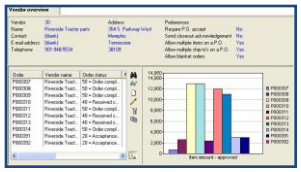
- Subsets, Views & Sorts can be flagged as a favorites
- When you pull down the list of available subsets, only the favorites will be displayed
- Reduces the number of public options displayed to only those that apply to







The New Face of MAPICS



Workspaces

- Multiple objects for the same file can be created on the PowerLink card
  - For example, if there are multiple sites being used, a subset for a specific site can be used to create an additional object for Item Revisions that will only bring up records from the site
  - Can create separate preferences for the workspace

E-mail Capabilities

- Host Job and Host Print functions have the capability to e-mail
- E-mail functionality on the iSeries must be activated
- Can select format:
  - HTML
  - PDF
  - Text

Help

The New Face of MAPICS

Power Expand

- When using an overview card, Power Expand will open all levels instead of having to ‘click’ on each plus button
- Default setting for Power Expand is set in system preferences – Miscellaneous Card
  - Need to sign off PowerLink and sign back on for this Preference to become functional

Multiple Open Actions

- When you double click on an item/order in a list you can specify what opens
  - Open (double click)
  - Alt + Open
  - Ctl + Open
- For example, on the Item Revision file, Open could bring up the card file in the change mode, Alt + Open would display the bill of material and Ctl + Open would display Item Warehouses

The New Face of MAPICS

Now with R7.8 Power-Link!

- Suppress nuisance information messages – a “Do not show again” box lets you eliminate.
- Host process confirmation shows all jobs being submitted at the same time; i.e., multiple EPDM reports you are running together and includes “tip text.”
- Specify landscape or portrait when exporting data to PDF—instead of having to change printer settings.
- User Definitions and User Preferences are now available outside of Integrator.

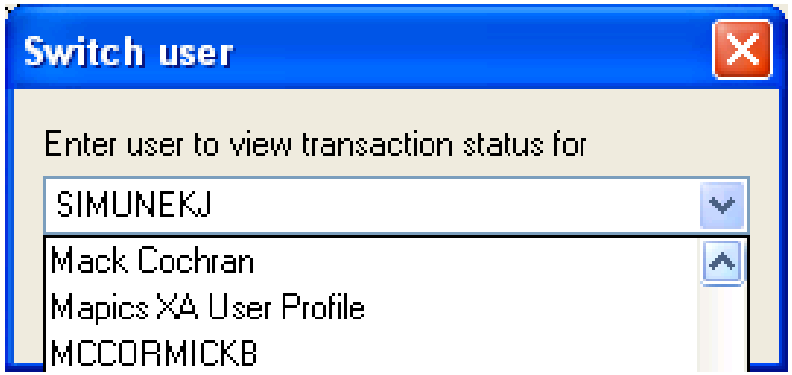
Help

The New Face of MAPICS

Now with R7.8 Power-Link!

- "Auto-content security" has moved from Integrator to base Power-Link.
- Users can now see transactions for other users instead of being restricted to their own Power-Link actions.



R7.8 Expanded Process Functionality

- Customer Service Management
  - End order enhancement
  - Split commissions
  - Price books
  - Reports
  - Invoicing from orders or shipments
  - Holds – list view gives visibility
  - Comments maintenance
  - Customer/industry item maintenance
  - Contracts/promotions maintenance
  - IFM customer maintenance

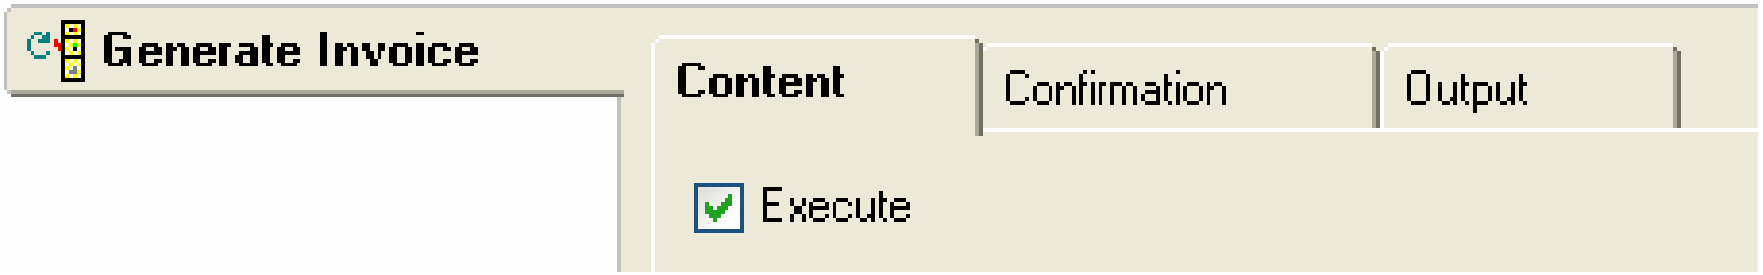
Invoicing



Invoices can now be generated from orders or shipments.

As a standard host job, the invoices can be e-mailed or stored as text, HTML, and/or PDF documents.

R7.8 Expanded Process Functionality

- Enterprise Product Data Management *(non-EPDM environments still the same)*
  - Maintain kits and kit components
- Procurement Management
  - Purchase Requests, Online PO Variances
  - Enhanced security for SOX requirements (federal tax ID/Social Security # has it's own security and pre-set security for separation of duties)
- Cameleon
  - De-couples engineering data from line-item entry, speeding up data entry process.
  - Configured item descriptions are saved in both CSM and EPDM.
  - MO's can be generated automatically from configured customer orders.

R7.8 Expanded Process Functionality

- Materials Management
  - New inventory transactions (IS, RC, TW, SA) and reversing transactions
  - Reason codes for all IM transactions
  - Receiving now has receipt by shipping notice, shipment containers and shipped items
  - Visibility and receipt functionality for “in-transit” stock being transferred to another XA warehouse
  - Inventory Status and Non-netting Locations
    - New field, Inventory Status, added to the Warehouse Location object to classify items to be withheld from certain activities.
  - Customer order pick lists – regular & stock pick combined
  - Customer order shipments (complete only for now)

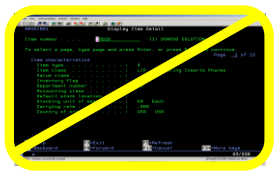
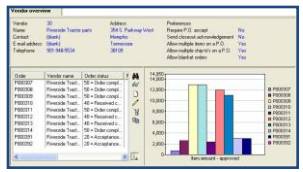
AR Ledger - CNY	USD 3,300.00
Cash - EUR	USD Unallocated: -100.00
Cash - GBP	USD Unallocated: -200.00



The New Face of MAPICS



R7.8 Expanded Process Functionality

- Order-Based Production Management
  - Application setting controls how users are notified when changing MO quantities with discrete allocations.
- Net-Link
  - Supports multiple internet browsers
- Environment Management
  - Includes Product Update feature to analyze and apply PTF's, PCM's and migrations from R6 to R7.

R7.8 Expanded Process Functionality

- Integrator
  - Imports and exports user code within user exits.
  - Publish and subscribe supports notification subsets, including all fields on regular subsets.
  - The User Definition and User Preference Administration functions have moved from Integrator to base Power-Link product.
- Translation enhancements
  - Add language to user profile and eliminate need for multiple MMLIST records and multiple database copies.
  - Install new applications and apply code fixes once without regard to individual languages.

R7.8 Expanded Process Functionality

- Link Manager
  - Provides enhancements for managing machines, processes and environments.
- System-Link
  - Calls to host jobs and reports
  - Define transactions groups
  - Supports conditional blocks in System-Link requests
- Performance
  - Extra caching of customization data
  - Use of System i SQL query engine

Summary

- Release 7.8 functionality takes a good thing (Browser) and takes it to then next level to make it an exceptional tool
- PowerLink works in conjunction with the other ‘Link’ applications
  - System Link
  - Net Link
  - Link Manager

Summary

- Taking the time to create custom cards, preferences, workspaces, etc. will allow you to be much more efficient and productive

Thank you for attending!
